

Embedded Systems Seminar – Reading Assessment/Review

For each paper, write up a short review using the following form for each paper assigned. Reviews do not have to be super long, but they should be detailed – especially when being critical. Also, try not to get too hung up on little things (typos, grammar problems, etc.) Reviews should focus on the larger picture and substantive strengths and weaknesses.

Name: _____ Date: _____

Paper Title: _____

Summary: (A 2-4 sentence summary of the paper)

Strengths: (List main strengths of the paper)

Weaknesses: (List main weaknesses of the paper)

Additional Comments: (Further justify lists, if necessary, with the most critical items first)

What potential directions of future work remain (if any)?
